7. Integrating Zoho Creator with Zoho CRM via Connections and APIs

Aim

To design, develop, and integrate a custom **Patient Appointment Booking** form in Zoho Creator with Zoho CRM using authenticated connections and automated workflow actions, enabling seamless lead and contact generation and data synchronization upon successful appointment form submission.

Procedure

1. **Application Setup:** Log into the Zoho Creator platform and create a new application titled *Patient Appointment Booking*.

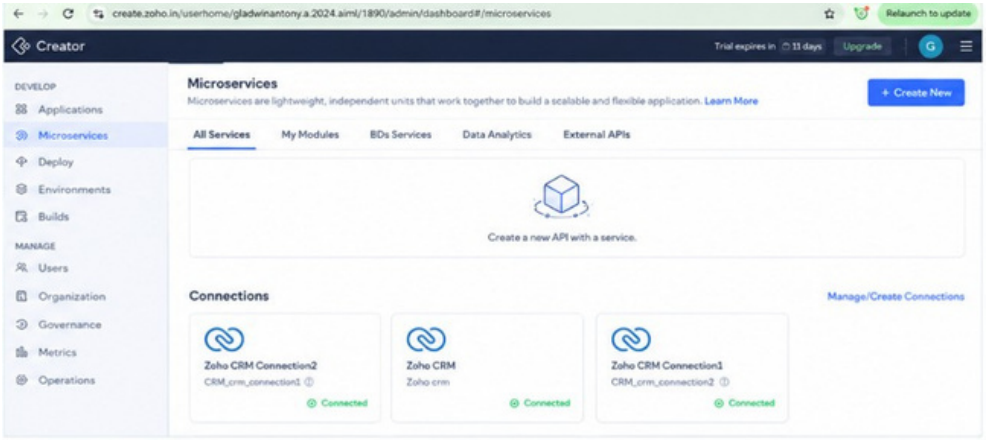

2. **Form Design:** Construct the *Appointment_Booking_Form* incorporating **Section-A** (Patient Details: Patient Name, Date of Birth, Gender), **Section-B** (Contact Details: Email, Phone Number, Residential Address), and **Section-C** (Appointment Details: Preferred Doctor/Specialization, Preferred Date & Time Slot, Reason for Visit).

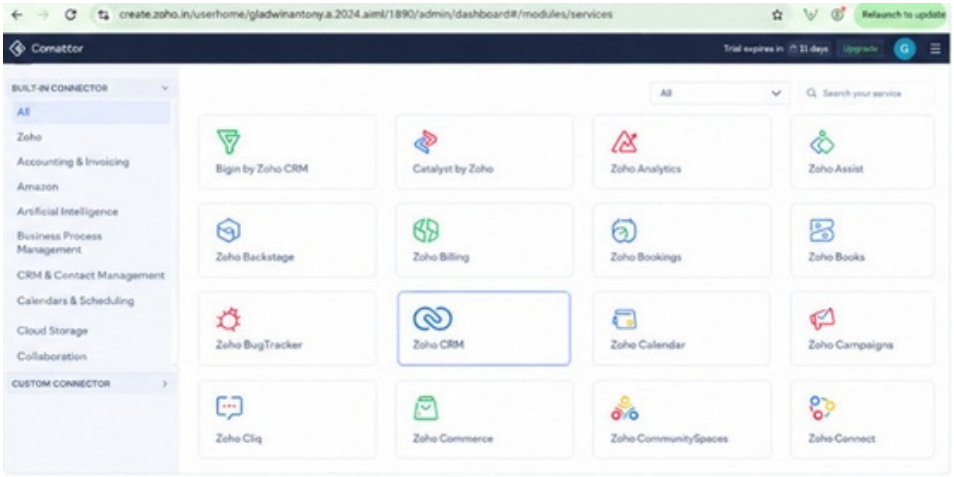

3. **Integration & Authentication:** Navigate to *App Preferences > Manage Integrations*. Select *Zoho CRM* and establish a secure OAuth connection. Verify that the connection badge displays **Connected**.

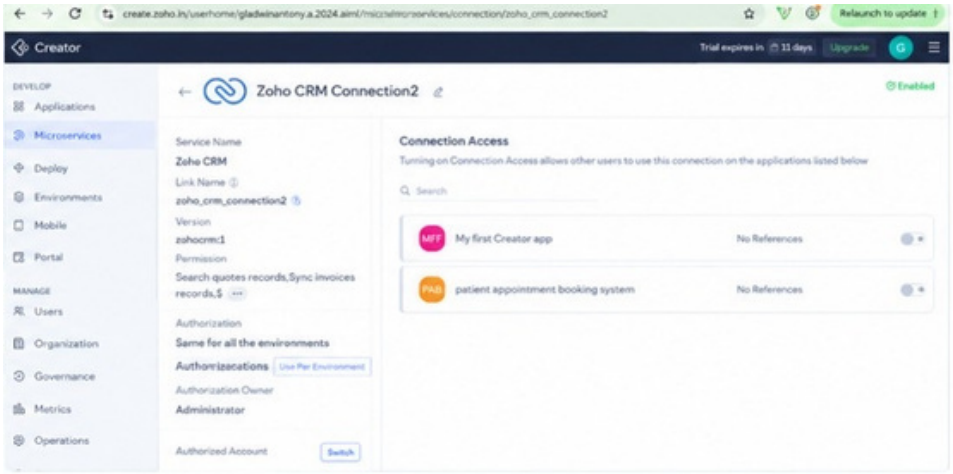

4. **Workflow Configuration:** Go to the *Workflow* tab, select the *Appointment Booking Form*, and create a new workflow under the trigger event **Created > Successful form submission**.

5. **Action Mapping:** Add an integration action inside the execution block to push patient appointment data directly to Zoho CRM modules (e.g., Contacts / Deals), then toggle the workflow status to **Enabled**.

Screenshots

Result

The **Patient Appointment Booking** application was successfully created and integrated with Zoho CRM. Whenever a patient fills out and submits the appointment booking form in Zoho Creator, the workflow triggers automatically, successfully executing the API push action to synchronize patient and appointment details into Zoho CRM in real time.
